

JANUARY 2022 NACR QUARTERLY REPORT ON DEPRIVATION (updated April 2022)

(July to Sept 2021 data; patient records were included if they had their initiating event date within the time period and sufficient sample within the named programme)

This is the second Quarterly Report for NACR detailing characteristics of patient demographics prior to starting ('pseudo-eligible' – ie. patients having an initiating event recorded on NACR) and also those starting Core/Phase 3 cardiac rehabilitation (CR) at a local service level for England, Northern Ireland and Wales within the time period. It has been shown both in wider reporting and research that patients from higher deprived areas have an association with not starting core CR. This report shows both the pseudo-eligible group and the starting population in terms of the index of multiple deprivation for each country. The level of deprivation is a multi-component index that monitors education, income and employment of an area. The level of deprivation is assigned at a patient level based on the smallest residential identifiers available e.g. Lower Super Output Area (small areas designed to be of a similar population size, with an average of approximately 1,500 residents or 650 households).

Each country has their own indices which are non-comparable with each other however, the trend by nation is fairly similar - see the totals at the bottom of each country table. In terms of the proportion of pseudo-eligible in each quintile, the range is 19–24%. When the pseudo-eligible are compared to the starting, it is clear in England and Wales that the two lowest quintiles have lower participation by proportion with a one to two percentage point drop. In Northern Ireland this trend at a national level is less evident, however, participation is not completely equitable with the middle quintile having a four percentage point drop.

This method of comparing pseudo-eligible to starting is useful as in some areas there is low to no patients from the lower quintiles in the pseudo-eligible group, which means participation will always be lower. The aim of this report is to enable programmes to focus on their own eligible population rather than compare with others.

Programme Code	Trust Name	Pseudo-Eligible Population (defined as the number of patients entered onto the NACR as initiating events in the time period, all patient groups are included)					Starters of Phase 3/Core Rehabilitation				
		Lowest Quintile (most Deprived)	2nd Lowest Quintile	Middle Quintile	2nd Highest Quintile	Highest Quintile (least Deprived)	Lowest Quintile (most Deprived)	2nd Lowest Quintile	Middle Quintile	2nd Highest Quintile	Highest Quintile (least Deprived)
